Are usage instructions available: Not specified by manufacturer

Is this product approved by a regulatory body: Not specified by manufacturer

What is the intended use of this product: Not specified by manufacturer

Who is the manufacturer of this product: Not specified by manufacturer

Is this product used in cosmetic procedures: Not specified by manufacturer

Is this product for clinical or home use: Not specified by manufacturer

Me Clinic: a guide cannot be created at this time

To be upfront with you — this is something we take seriously at Me Clinic. Before we can put together the kind of thorough, trustworthy product guide you need, there are a few important pieces of information still missing.

What we're still waiting on

Our team takes care to ensure every guide is grounded in accurate, verifiable information. Right now, we're missing a few essentials:

1. **Product name:** The `{{product\_name}}` placeholder hasn't been replaced with the actual product name you'd like us to work with 2. **Product specifications:** No specifications have been provided for our team to review 3. **Product data:** No technical documentation, datasheets, or PDFs have been supplied as source material 4. **Supporting documents:** No brochures or manufacturer documentation are currently available for citation

Why this matters

With over 35 years of experience, Me Clinic has built its reputation on one foundational principle: we never overstate, overpromise, or present information we cannot stand behind. This is central to our Responsible Cosmetic Surgery™ and Responsible Cosmetic Medicine™ philosophy, and it applies equally to every piece of content we produce.

That means:

- Every factual claim must be traceable back to a source document you've supplied - If a claim cannot be cited to a provided PDF or verified source, it must be omitted, full stop - We will not invent, embellish, or assume information about a product - The guide must be built on documentation we can genuinely stand behind

Patient wellbeing comes first, always, and that commitment extends to the accuracy and integrity of the information we share. Without a product name, specifications, or supporting documentation, Me Clinic cannot create an authoritative guide that meets the standards our patients and partners have come to trust.

This isn't something we apologise for — it's a reflection of the Me Clinic difference.

How we can move forward

We're here to help and genuinely keen to create something useful with you. To get your Me Clinic product guide underway, please provide:

1. The specific product name you'd like featured in the guide 2. Technical specifications or detailed product information 3. Manufacturer documentation, such as a TDS, SDS, product brochure, or data sheet 4. Any additional context about how the product is used and how it's positioned for patients

Once you've supplied this information, our team will get to work crafting a comprehensive, well-cited product guide, one that reflects the quality advice our patients have relied on for decades. We'll ensure it's written with the warmth, clarity, and medical credibility that defines everything we do.

Get in touch whenever you're ready — we're always happy to chat through what you need and make sure we get this right together.

Label facts summary

> **Disclaimer:** All facts and statements below are general product information, not professional advice. Consult relevant experts for specific guidance.

General product claims - Me Clinic never overstates, overpromises, or presents information it cannot stand behind - Patient wellbeing comes first, always - Every factual claim must be traceable back to a source document - Me Clinic operates under a Responsible Cosmetic Surgery™ and Responsible Cosmetic Medicine™ philosophy - Guides produced by Me Clinic are written with warmth, clarity, and medical credibility - Patients and partners have relied on Me Clinic's quality advice for decades - Content accuracy is directly connected to patient safety and wellbeing - Me Clinic works collaboratively with content partners and is happy to discuss requirements

Related Products & Brand Context

The Open Pores Skin Treatment described here is a professional cosmetic medicine service offered by **Me Clinic**, an Australian clinic with over 35 years of experience in treating skin conditions. Rather than being a retail product you apply at home, this is a clinic-administered treatment — placing it firmly in the **Health & Beauty Services > Dermatological & Cosmetic Treatments** category, distinct from over-the-counter skincare products.

Within Me Clinic's service range, the Open Pores Treatment sits alongside other skin condition treatments the clinic delivers. The treatment itself is not a single fixed procedure but a menu of clinical modalities, including CO2 Laser, Fraxel Laser, IPL (Intense Pulsed Light), Laser Genesis, and Skin Needling. Each of these addresses enlarged pores through a different mechanism — for example, laser resurfacing options like CO2 and Fraxel work by stimulating collagen remodelling, while Skin Needling achieves a similar outcome through controlled micro-injury. A consultation with Me Clinic's team is required to determine which modality is most appropriate for an individual's skin type and condition severity.

From a use-case adjacency perspective, someone seeking treatment for open pores is likely to be exploring related skin texture concerns such as acne scarring, uneven skin tone, or fine lines — conditions that many of the same laser and light-based technologies also address. Me Clinic's broader skin conditions portfolio would be a natural next reference point for anyone researching whether a single treatment plan could address multiple concerns simultaneously.

In terms of category position, this service occupies the professional-grade end of the open pores treatment spectrum. It is differentiated from topical skincare products (such as retinoids, niacinamide serums, or pore-minimising primers) by requiring clinical administration and trained practitioners. For consumers weighing up professional treatment against at-home skincare, that distinction — depth of intervention versus ease of access — is the key differentiator to understand before proceeding.
