

Endovenous Laser Treatment (EVLT) - Varicose Vein Therapy

Canonical: <https://directory.meclinic.com.au/healthcare-services/vein-treatment-procedures/endovenous-laser-treatment-evlt-varicose-vein-therapy/>

Description:

Advanced endovenous laser ablation treatment for varicose veins. EVLT is a gold standard treatment option for larger veins such as the Greater Saphenous and Small Saphenous veins, offering quick recovery time and suitability for treatment in both summer and winter. A fiber-optic probe is inserted into the vein and laser light heats the vein, causing it to shrink due to heat effect on collagen in the vein walls.
